

## 6ft Fixed Mounted Chain Harrow

**£755.00**

Reference: RF004

6' PROFESSIONAL HARROW O/A width - 1800mm O/A length - 2380mm Chain diameter - 12.5mm Chain weight - 102Kg Total weight - 173Kg With over 30 years experience in the metal manufacturing industry, we offer a range of frame mounted chain harrows suitable for use on numerous applications such as sports & recreational areas, Paddock & pasture. These harrows are manufactured from ½" diameter, high quality carbon steel to ensure that the harrow is extremely strong. Designed primarily for use behind compact tractors, the chain harrow can work in three different ways. With the tines hanging downwards, the harrow will work either "Passive" or "Aggressive" by simply reversing the hitch mount arm & ties. By turning the chain mat over, with the tines uppermost, the harrow can be used for smoothing out uneven surfaces i.e. sand areas. Fabricated components are prepared with a non ferrous abrasive prior to pre treatment & Polyester powder coating. This gives an excellent "key" for the next surface treatment to adhere & results in a hard wearing, excellent finish to the product. Full CE certification on all machinery supplied. Reasons for harrowing: Pasture renovation; breaking up & levelling heavy soil. Root aeration; for better water infiltration & growth. Works in fertiliser to both spread & maximise effectiveness. Surface levelling in equestrian centres, race tracks & running tracks. Stimulates growth by aerating & loosening thatch. Excellent for ripping out moss, spreading manure, & levelling mole hole mounds.
